

# Propane Tank Filling

## IND560X

## Cylinder Filling

Propane tank filling has become a “hot” item in the past few months. To provide a clean, integrated solution, we have created a Custom package that is safe, compact, and easy to install and operate.

The IND560X is installed in a Stainless Steel Enclosure and includes operator inputs for Start and Stop. Integral to the IND560x enclosure is a Type 7/9 box containing an Intrinsically Safe switching device capable of switching 120VAC power to explosion-proof control equipment.

This integrated solution provides high-level voltage control for the customer within the hazardous area, close to his fill station utilizing agency approved equipment.
