HIGH SPEED BAG OPENER FKT 800

Fast and easy adjusting chain guide

The air channel is easily removed for cleaning

This time saver assists in your packaging process by opening and inflating any brand-name shrink bag or vacuum pouch before your product is placed in the bag. The inflation of the bag, created by the stainless steel blower, greatly improves the ease of

the entire operation. The capacity for this procedure is 20 to 30 pieces per minute, making it suitable for high capacity packaging systems. It takes just minutes to change or adjust bag sizes. And, the air flow automatically adjusts to the bag size.

A stainless steel water drip pan at the blower provides for easy disassembly for cleaning. Its construction meets with hygienic standards and complies with all safety requirements.

Technical Specifications

Dimensions:	3.6-ft x 1.5-ft x 3-ft
Capacity:	20-30 cycles per minute
Electrical:	230/60Hz
